HFocused Ecosystem Restoration Plan

The Focused Ecosystem Restoration Plan (FERP) is being developed to provide stakeholders with a vision of the Lower Passaic River. The FERP will provide conceptual designs and planning for potential restoration opportunity sites along the main riparian corridor of the Lower Passaic River. To maintain integration under the Urban River Restoration Initiative, the FERP is anticipated to be a companion document to the Focused Feasibility Study, which addresses CERCLA-related remediation in the lower 8 miles of the river.

[Click here](#) to download the restoration opportunities that have been identified to date which include existing data about the site, a proposed conceptual restoration plan and the Target Ecosystem Characteristics (TECs) that can be implemented within each footprint. The TECs that could be advanced at each site will advance the overall goals and targets outlined in the Hudson Raritan Estuary Comprehensive Restoration Plan.

The FERP will be based on previous planning documents, work group sessions, and field work conducted in the river, including:

i Alice,
I found a glitch in the web site. Could not open the link in the above item where it says "click here".

Thanks for your help.

Harvey
